

Test Updates: Human Papillomavirus (HPV) 16/18 Genotyping

Dear Regional Pathology Services Clients,

Effective April 29th, 2024, the microbiology laboratory will begin performing high risk genotyping for 16/18 on all human papillomavirus (HPV) tests collected in ThinPrep (PreservCyt) and Surepath Pap test vials. Fourteen high risk HPV genotypes are included. Genotypes 16 and 18 will be individually tested and reported. The remaining high-risk genotypes will be tested in a pool (31, 33, 35, 39, 45, 51, 52, 56, 58, 59, 66 and 68) and reported together.

This test is all inclusive, therefore, no additional tests are required to be ordered for the 16/18 genotyping. Please deactivate HPVGEN and HPVPLB as these are now included components in the HPVSP, HPVTP and HPVSPO. There will be no change in collection requirements, CPT codes or stability.

Test Code	Test name
HPVSP	HPV with 16/18 genotyping, SurePath
HPVTP	HPV with 16/18 genotyping, ThinPrep
HPVSPO	HPV with 16/18 genotyping, SurePath only (No Pap)
*Test and a survey site the	

*Test codes remain the same but new result components have been added.
