## **Lab Alert: Temporary Service Interruption**

**Update May 1, 2025**

Dear Regional Pathology Services Clients,

We continue to assess impacted testing due to the water-related damage to instrumentation in the Microbiology and Serology Laboratories. The following updates aim to improve turnaround times during this period.

### **UPDATES AND CHANGES TO IMPACTED TESTING:**

#### Antinuclear Antibody—

- Results are currently reported in 3-5 days.
- New test codes are being created to reduce turnaround time, build info to follow.
- Impacted test codes include ANAIF, ANAPN, ANASCR, ANAFLX, along with the individual autoantibody codes.

#### Hepatitis C—

- Discontinue ordering HCAB or HCABX temporarily.
- Order/build the temporary test code HEPCQR-Hepatitis C Antibody with reflex to Quant.
  - A positive result will automatically reflex.
  - See attached build information.

#### Acute Hepatitis Panel—

- Discontinue ACHEP temporarily.
- Order ACHEPX—please note the result codes will need to be modified
  - A positive result will automatically reflex.
  - See attached build information.

#### Epstein Barr Virus Antibodies Panel/EBV Specific Serology (EBVAT)—

- Result code EBINT will not be reported electronically
- Interpretations will now be reported with individual tests in the panel
  - See attached build update

#### Susceptibility and ID—

- Some are being redirected to our partner reference laboratories.
  - Those results are available via fax and RPS Pathways only.

### **RESULTS:**

- Interfaced clients: Some results will be returned electronically and file as normal, however, some test codes may be changed and will not file as expected. Monitor your systems for unsolicited results. Faxed results will not be available in the interface.
- Non interfaced clients: In some cases, results will be faxed to you, or available in RPS Pathways.

We appreciate your understanding and cooperation during this time and will continue to provide updates as information becomes available.
